

Please help admin

Posted by blakey87 - 2008/04/06 20:18

Im using a component which uses tables, but it seems as if every time I apply what the instructions tel me, the sdite stops loading, please tell me were I could be going wrong

```
echo "";  
echo " Rank                Description                Hits In                Hits Out  
";  
  
$c_switch = 0; // color switch  
$count = 0; // count members rank  
  
if ($rows){  
foreach ( $rows as $row )  
{  
$count+=1;  
echo ""; /*** need to make a HTML_topsites::displayTr  
//Display Rank  
HTML_topsites::displayColumn(" $count"),");  
//Display Description  
$link = " . \$row->name . ";  
HTML_topsites::displayColumn($link . "  
$row->description"),");  
//Display Hits In  
HTML_topsites::displayColumn($row->hitsIn,'center');  
//Display Hits Out  
HTML_topsites::displayColumn($row->hitsOut,'center');  
echo "  
";  
  
$c_switch = 1 - $c_switch;  
}  
}  
  
//display "Add your site here!"  
for ($i = $count; $i numoflinks; $i++)  
{  
$count+=1;  
echo "";  
//Display Rank  
HTML_topsites::displayColumn(" $count"),");  
//Display Description  
HTML_topsites::displayColumn(" Add your site here!  
";");  
//Display Hits In  
HTML_topsites::displayColumn(0,'center');  
//Display Hits Out  
HTML_topsites::displayColumn(0,'center');  
echo "
```

```
";  
  
$c_switch = 1 - $c_switch;  
}  
  
//Table footer  
echo "";  
echo "{ sbdnicertables titleId=test} *";
```

I hope you could help as this mambot is something I've been looking for - for a while

Hi,

Sorry for the delay. A few things from your code - technically you don't need the colour switch as this mambot will perform that for you, as I don't know which formatting may take precedence etc...

The most obvious is the line calling the mambot is wrong so it'll not actually invoke the mambot. The correct call should be:

```
{sbdnicertables tableid=test}
```

Does this component enable the use of mambots on its content? not all components to our knowledge enable this.

Kind Regards

Yea I realized that the component does not enable use of mambots, do you have a solution for me to enable mambots possibly for this component?

There are ways to enable mambots within a component but they do require editing the component, and it may not be designed correctly to run them. However it is possible to manually enable the mambot by adding the javascript directly to your source code.

You will need to add the following to the header of your template (to enable XHTML compliance) otherwise any before the next bit of code.

```
@import "http://joomla10.simplebydesign.co.uk/mambots/content/sbdnicertables/sbdnicertables.css";
```

You will only need the css line if you plan to format the look via css.

Once you have added that you will need to add the following below the table:

```
var headerOff = 1;  
var footerOff = 0;  
var oddCol = '#cccccc';  
var evenCol = '#ffffff';  
var moverCol = '#f5f5f5';  
var onclickCol = '#f5f5f5';  
var oddStyle = 'sbdna';  
var evenStyle = 'sbdna';  
var moverStyle = 'sbdna';  
var onclickStyle = 'sbdna';  
var useCSS = 1;
```

```
tigra_tables('table_id', headerOff, footerOff, oddCol, evenCol, moverCol, onclickCol, oddStyle,  
evenStyle, moverStyle, onclickStyle, useCSS );
```

This is not enabling any of the filter/sorting. Basically you will need to replace table_id with the id of the table, and the configure the other parameters:

headerOff - when to start highlighting the rows from the top of the table
footerOff - when to stop highlighting the rows from the bottom of the table
oddCol - odd rows colour
evenCol - even rows colour
moverCol - mouse over colour
onclickCol - on click row colour
oddStyle,evenStyle,moverStyle,onclickStyle - leave these
useCSS - use CSS for row info 1 yes, 0 no

If you require filter/sorting please let us know and we'll have a look and post the javascript you require.

Kind Regards

We shall double check the code, but there should be no reason as to why the javascript will not work outside of the mambot.

I managed to get it working, thanks

how do I get rid of the gaps in between the tables, I thought it was border but I've set it to 0

Thanks in advance

Hi,

The other options table wise that affect layout as:

cellpadding
cellspacing

Or you may find that there is padding or margins at work as well.

Hope this helps

Hi,

The table uses classes for the CSS, try editing the following to affect the lines of the table:

```
.eveCol{
  border-right: 1px solid #C1DAD7;
  border-bottom: 1px solid #C1DAD7;
  background: #fff;
  padding: 6px 6px 6px 12px;
  color: #4f6b72; }
.movCol{
  background: #cccccc;
  color: #797268;
  font-weight: bold;
}
.oncCol{ background-color: #660066; }

.oddCol{
  background: #F5FAFA;
  color: #797268;
}
```

Hope this helps.
